

## ABSTRACT

**Title:** “Translation of medical film into Russian (based on the film "The End of Antibiotics)”.

**Author:** Thi Xuan Quynh Cao, Bachelor’s program student, Institute of Translatology and Multilanguage Studies.

**Field of Education:** 45.03.02 Linguistics

**Specialization:** Translation and Translatology

**Research Supervisor:** A.A. Sokhan, Candidate of Philology, Associate Professor of the Chair of Theory and Practice of Translation and Interpretation.

**Research Initiator:** Pyatigorsk State University; 9 Kalinin St., Pyatigorsk, Stavropol Krai.

**The timeliness of this research** is due to the fact that medical translation is one of the most important areas of translation activity and is seen as a variation of scientific and technical translation. It is becoming increasingly important due to the development of cooperation and exchange of experience in the medical and health care field, as well as with the development of the industry and technology.

**The purpose of the research** is to examine difficulties in translating medical texts, make a translation analysis of submitted articles.

To achieve this purpose it was necessary to solve the following **tasks**:

1. to give a general characteristic of medical translation;
2. to explore and analyse the features of medical translation;
3. to suggest ways to solve problems encountered in the translation of medical films;
4. to consider ways of medical film translation;
5. to conduct a translation analysis of the submitted film.

**The theoretical relevance of the research** is that due to the fact that the rapid development of science and technology leads to the need for high-quality translation in various fields, including medicine. The phenomenon of medical

translation attracts special attention of researchers (D. V. Samoilov, V. N. Komissarov, N. N. Gavrilenko).

**The practical relevance of the research** is in the fact that the materials and results of this graduate qualification work can be used in practical work of a translator, as well as in the preparation of theoretical and practical courses on translation studies and lexicology.

**The results of the research** contribute to a better understanding of the translation process of medical texts from the point of view of translation studies, summarise the theoretical material and the data obtained from the analysis of the use of various types of translation transformations in the translation of medical terms in the study material, and presents the main conclusions of the work.

**Recommendations:** The obtained theoretical and practical results of this research can be used by students, masters, medical professionals, linguists, etc.
