

## ABSTRACT

**Title:** “Characteristics of the English aviation terminology and the ways of its translation into Russian”.

**Author:** D.D. Lomkova, Bachelor’s program student, Institute of Translatology, Russian Studies and Multilingualism.

**Field of Education:** 45.03.02 Linguistics

**Specialization:** Translation and Translatology (English and Spanish)

**Research Supervisor:** M.R. Sarkisyan, Candidate of Philological Sciences, Associate Professor of the Chair of Western European Languages and Cultures.

**Research Initiator:** Pyatigorsk State University; 9 Kalinin St., Pyatigorsk, Stavropol Krai.

**Research relevance** is determined by the need to systematize specialized vocabulary in the field of aviation for two reasons which include: 1) globalization, as a result of which the frequency of international contacts increases; 2) the rapid development of science and technology, which contributes to the emergence of more and more new terms that require adequate translation from one language into another.

**Purpose:** to determine the share of each group of aviation terms as a percentage of the total amount of selected language material (100%) by their morphological and syntactic structure, as well as to identify the most frequent ways of their translation into Russian.

**Tasks are as following:**

1. to study the data devoted to the notion of “term”;
2. to define the notion of “term”;
3. to consider the term as part of the term system, the ways of classifying the terms and possible translation difficulties that arise in the process of translating the terms into Russian;
4. to analyze the methods of term formation in the aviation term system;
5. to select terms from aviation-related articles;

6. to classify the terms into groups as well as to identify the main ways of translating aviation-related terms from English into Russian.

**The theoretical significance** of the study lies in the fact that in its process theoretical data were collected on the topic of aviation terminology, its systematization and methods of translation were clarified.

**The practical significance** is determined by the fact that the results obtained and the conclusions drawn can be used in the process of translating aviation-related texts.

**The results of the study** contribute to a better understanding of the various ways of classifying aviation terms and the possible difficulties that arise in the process of translating them. After analyzing and translating the material, we made the necessary calculations, as a result of which we were able to present the number of terms of each morphological and syntactic group as a percentage of the total number of terms selected for analysis, and also were able to identify the main ways of translating aviation terms from English into Russian.

**Recommendations:** The theoretical and practical results obtained in this study can be used in the process of studying the basics of terminology, in the process of translating articles on aviation, as well as for making dictionaries, glossaries and thesauri.
