

## Summary

The topic of the final qualifying work: "Technologies for preventing deviations in the youth environment (for EXAMPLE, gkou SOSH 20 of the Republic of Ingushetia, Malgobek).

Author of the WRC: **Ganieva Madina Alihanovna.**

Scientific supervisor of the WRC: candidate of pedagogical Sciences, associate Professor of the Department of creative and innovative management and law Davydova E. V.

Relevance of the research topic. The scientific significance of the study of the causes and methods of correction and prevention of social deviation of young people is due to the need of society to actively prevent deviant behavior in the socio-cultural space of the Russian Federation. In the most difficult situation in the transitional periods of development of society is the youth, whose worldview system is in the process of formation, and not a clear, emerging system of values of the transforming society can not give the young person the necessary guidelines for behavior.

In the context of regional society, this need is also caused by the fact that Russian society over the past three decades has been undergoing a process of transformation in all spheres of life: social, political, economic, and spiritual. These processes have led to an active spread of deviations of a significant part of young people. It should also be noted that the deterioration of social conditions that determine the nature and extent of deviation requires the development of a system of measures that are differentiated and specifically targeted by regions and individual social groups of the young population as soon as possible.

In this regard, it is necessary to pay attention to the fact that the problems of youth – education, socialization, professional self-determination in the Soviet period were dealt with by the state. There were special youth organizations (pioneria, Komsomol, etc.). in the conditions of cultural and economic crisis, when all segments of the population needed special help and support, young people socialized themselves, i.e. they were sent to "free swimming".

When studying the behavior of modern youth, it is necessary to take into account all the factors that affect their lifestyle, socialization, adaptation and formation processes. The problem, both in scientific and practical terms, is the study of the spread of violations of social norms in the youth environment – drug addiction,

substance abuse, alcoholism, rejection of generally accepted moral norms, sympathy for extremist ideas, etc. The most dangerous thing in the youth environment is not just a quantitative increase in the number of people subject to deviations of various kinds, but the fact that this growth is expected can provoke the possible loss of a significant part of the intellectual, physically active and demographic reserve of society. In 2019, 966 persons who committed crimes were registered in the Republic of Ingushetia, of which 40 are minors.

It is necessary to shift the focus of work with young people to the regional and local level, significantly strengthening socio-pedagogical, political, financial and organizational support for health, education, physical education and sports as the main subjects of preventive action in the fight against youth deviations. To solve this problem, modern social technologies aimed at preventing deviations in the youth environment should be a mandatory tool.

The purpose of the work: scientific substantiation of the application of social technologies used in work with young people in the context of prevention of deviant manifestations and improvement of preventive work.

Research objectives:

- study foreign sociological research on the main forms of social deviations of young people;
- to consider the theoretical approaches of modern Russian scientists to the study of deviant phenomena in the youth environment;
- identify regional, territorial and ethnic factors that affect the problems of deviant behavior of young people;
- analyze modern social technologies in working with young people, aimed at preventing deviant phenomena in the youth environment;
- to identify the problems of youth deviations characteristic of the youth of the Republic of Ingushetia and technologies for their prevention;
- to develop a Program "Prevention of manifestations of deviations and offenses among minors" for the state educational INSTITUTION SOSH 20 of the Republic of Ingushetia, Malgobek.

Object of research: social deviations characteristic of the youth environment.

Subject of research: modern technologies aimed at preventing deviant behavior among young people.

The theoretical significance of the research lies in the fact that the conclusions formulated in this work can be used in the scientific development of the designated problem, and contribute to the further search of scientists in solving the problems of youth deviation.

The practical significance of research consists in the possibility of further use of research results in institutions and organizations related to work with young people, and invited us to a particular educational institution Program "Prevention of the manifestations of deviance and juvenile delinquency" for GKOU SOSH 20 of the Republic of Ingushetia, Malgobek can be taken as a basis for educational institutions of the Republic of Ingushetia, but also may be applied in other regions of the North Caucasus Federal district.

Approbation. We have developed a Program "Prevention of manifestations of deviations and offenses among minors" Republic of Ingushetia, Malgobek, 25 gardanova street, gkou SOSH 20. this program is presented to the Director and Deputy Director of GKOU SOSH 20. Republic of Ingushetia, Malgobek. After consideration, our program was approved and accepted for implementation.

Research result. Our research has shown that the problem of deviations in the youth environment at the regional level is not sufficiently studied. The most serious impact of the situation of socio-cultural risk has on young people, which is explained by its special social significance and position. Young people are in a situation of transition from the status of a young person to the status of an adult.

In this paper, we understand the extensive experience of Russian sociologists in the study of deviant phenomena in the youth environment, and identify regional, territorial and ethnic factors that affect the problems of deviant behavior of young people.

In the second Chapter of the final qualification work, we were able to analyze modern social technologies in working with young people in Russia, aimed at preventing deviant phenomena in the youth environment and identify problems of youth deviations characteristic of the youth of the Republic of Ingushetia.

In the practical part of the work, we have developed a Program "Prevention of manifestations of deviations and offenses among minors" for GKOU SOSH 20 of the Republic of Ingushetia, Malgobek. This program is aimed at providing a unified integrated approach to resolving situations related to the problems of manifestations of deviations and offenses in the adolescent environment, as well as creating conditions for the effective functioning of the system of prevention of deviant manifestations among adolescents studying at the educational institution of

state EDUCATIONAL institution SOSH 20. Republic of Ingushetia, Malgobek.  
After consideration, our program was approved and accepted for implementation.
