

Summary "Modern and historical models of wordbuilding"

by the graduate Chrebtova Maria

One of the main problem of any language was treated in this graduate work. The aim of the vocabulary of language is to reflect all events in social life. Enrichment of the vocabulary is a usual process to any language. Derivation and its modeling in language is an attempt to classify the process of replenishment of the vocabulary.

In this paper the problem associated with historical and modern stages of word formation and the emergence of new not previously existed lexical units, borrowing etc are handled.

There are the following ways of word - formation conversion, compression, contamination - which are the most productive. Many of them have been known since ancient times.

There are trends of substitution of the vocabulary of the German language to borrowings, namely the English-American.

The newly formed lexical units exist in the language definite time, it will disappear from the active use in the future, or will to be replaced by others.

Different methods and research were used in the diploma.

In the research paper examples from the art literature, dictionaries and linguistic literature were used.

Comparative analysis conducted in this paper, showed that some morphological models are more productive while others are less.
