Abstract

Educational technology is not only using of technical learning tools, or computers it is also the optimization of the educational process, using of effective methods, a combination of required and repeatable sequence of pedagogical actions of the teacher and students that leads to scheduled didactic task. Educational technologies play a exceptionally important and expanding role in the modern educational system of Russia.

One of the productive methods it is a case technology. This is an innovative teaching method, which takes into account all the features of the subject "Foreign language" and create the necessary knowledge, skills and abilities. This technology in reading is a teacher-generated folder that contains the biography of the author, a set of adapted/unadapted texts and tasks (predective, text, post-text) aimed at formation of competences of students in the reading pane.

The advantages of this technology are that reading can be as a group and be aloud to yourself. Alleged to the text material (biographical, additional, illustrative) contributes to an in-depth comprehension, the optimization of the extraction of meanings, save time in the classroom.

In practice there were 12 lessons, where we have introduced in educational process the cases which contained texts in Spanish with different themes and exercises to them.

The use of innovative technologies in teaching of reading involves the formation and introduction in practice of teaching Spanish didactic development on the mastery of competencies in the area of reading.
