

## SUMMARY

**Subject Matter of the Graduation Thesis:** Management in the field of ecology and environmental protection at the municipal level and ways to increase its effectiveness (based on materials from Pyatigorsk).

**Author of the Graduation Thesis:** the 4<sup>th</sup> year student of the Higher School of Management Tkacheva Suzanne Yurievna.

**Scientific Supervisor of the Graduation Thesis:** the Candidate of Historical Sciences, Associate Professor of the Department of Creative and Innovative Administration and Law Eremina O.S.

**The Information about the Contracting Authority:** Administration of Pyatigorsk city.

**Topicality of the Research:** The issues of nature conservation and preservation of a healthy environment have become a subject of increased attention for modern human society. They are constantly rising both at the international level and at all levels of government and local governments.

Environmental management is particularly important and effective at the local level. Firstly, it is at this level that most of the needs of the population are satisfied. Secondly, only at the municipal level does the opportunity for targeted formation of the environmental behavior of the population open up. Thirdly, at the municipal level, an opportunity opens up for the deployment of environmental activities of the population.

**The Objective of the Research:** is a comprehensive study and analysis of management in the field of ecology and environmental protection at the municipal level, as well as the development of practical recommendations for its improvement.

**Tasks of the Research:**

- disclose the strategic goal and main tasks of the Russian Federation in the field of ecology and environmental protection;

- consider the features of public administration in the field of ecology and environmental protection;
- to study the specifics of management in the field of ecology and environmental protection at the municipal level;
- explore the current situation in the field of ecology and environmental protection of the city of Pyatigorsk;
- to analyze management practices in the field of ecology and environmental protection at the municipal level;
- to formulate ways to improve management efficiency in the field of ecology and environmental protection at the municipal level

### **The Theoretical and Practical Significance of the Graduation Thesis.**

The work explores theoretical and practical problems, the solution of which will help to increase the efficiency of management in the field of environmental protection at the municipal level. In addition, the conclusions and practical recommendations developed during the study can be used both in the work of the administration of Pyatigorsk and in the activities of local authorities of other municipalities.

**Findings of the Research.** The main strategic priority of environmental policy pursued by the administration of the city of Pyatigorsk is the creation and support of a safe, convenient and comfortable environment in the resort city of Pyatigorsk. In the framework of the municipal program of the city of Pyatigorsk “Ecology and Environmental Protection”, the following main measures are being implemented: management of production and consumption waste; water conservation; forest protection and landscaping; environmental improvement; arrangement of places of mass rest; conducting measures to prevent emergencies.

**Recommendations** Currently, environmental culture and education are becoming increasingly relevant and are called upon to play a decisive role in ensuring environmental safety, to serve as a guarantee of sustainable development of society. The main goal of the formation of ecological culture is to unite the efforts of all government bodies and local self-government, public associations,

business entities and citizens in order to form an environmentally responsible position of the residents of Pyatigorsk. For this, it is necessary to solve the following interrelated tasks: improving the effectiveness of environmental education, as well as pre-school, school and extracurricular environmental education; dissemination of environmental knowledge among various segments of the population; involvement of the media in the consolidation of residents around the problem of preserving and improving the environment.
