

## **Abstract**

### Graduation Level of Proficiency Paper

(Master Degree)

**Title:** Linguistic features in the comments of the Internet network space (based on the material of German, English and Russian languages)

**Author:** Kolyuchkina Tatjana Vladimirovna

**Research Supervisor:** Cand. Sci. (Philology), Associate Professor of the Chair Cand. Philol. associate Professor of the Department of germanistics and intercultural communication of the Institute of Romance and Germanic languages, information and humanitarian technologies A. E. Mirzakhanova.

**Topical Importance:** the research is determined by the fact that journalism, as a field that is maximally open and accessible to a large number of readers, is a reflection of the language and social processes that occur in society. As a response to the needs of society, journalistic discourse contributes to the emergence of new topical genres designed to meet the conditions for the development of public life. One of these genres, which appeared mainly due to the development of information technologies, is the genre of commentary.

**Goal:** to describe the language features of the comment text in Russian, German, and English.

**Tasks:**

- to describe the text and its linguistic characteristics.
- to describe the variety of genres of text on the Internet.
- to identify and compare the linguistic features of the genre of commentary on the Internet in German, Russian and English..
- to conduct a comparative study of the linguistic features of the text of the commentary of the Internet network space in German, English and Russian.

**The theoretical significance of the study** lies in the developing of the problems of the theory of discourse and genre formation in the Internet, which can be applied to modern developing genres of Internet communication.

**The practical significance of the study** is determined by the fact that its the results can be applied in teaching practice, including in courses on discourse theory and communication theory.

**The result of the study** was the identification and analysis of the linguistic features of the comment text in the nonprofessional activities in the Internet network.
