

ABSTRACT

Subject matter of the dissertation: «Improving children's school of arts as a subject of socio-cultural sphere»

Author of the master's dissertation: Medarova Vakhidat Amirkhanovna

Scientific supervisor of the master's dissertation: Dmitrieva Yuliya Pavlovna

Customer organization: Municipal state institution of additional education of children "children's art school Nazran"

Topicality of the research: in the modern sense of socio-cultural activities of children's art schools (hereinafter schools), which these organizations can and should implement in the operation of urban educational space. The basis of the activities of CAS I is for many centuries the Russian system of art education and the socio-cultural sphere, the principles, forms and methods of transmission to new generations the cultural heritage, the experience of creative perception and creation of new objects and phenomena in various kinds of art, the organization of spiritual, moral, aesthetically-developed infrastructure, which includes specialists in the humanitarian sphere.

Objective: improving activities of children's schools of arts as a subject of socio-cultural sphere.

Tasks:

- to explore the socio-cultural sphere of the modern city;
- consider children's school of arts as a subject of socio-cultural activities;
- to analyze legal framework for the activities of children's schools of arts;
- to study the characteristics of CAS of Nazran ' as a subject of socio-cultural activities;
- to perform activities of CAS of Nazran';

-to develop recommendations for improving the activities of CAS of Nazran ' as a means of aesthetic education of children and youth.

Theoretical significance of the research: expressed in and systematic presentation of the main types, forms, processes and results of professional activities of CAS in the context of development system of additional education of children.

Practical significance of the research: is that it revealed positive reserve of the theory and practice of social and cultural functions of institutions of additional education of children can be used in modern art.

Results of the research: analyzing the control system of Nazran, I can say that today, despite the effective work of the school of arts overall, the quality of the provision of educational services to the population, the established system of motivation of employees, creating a team favorable moral-psychological climate, etc., to improve communications and improve its image in this school needs to improve the scientific organization of labor administrators. Thus, the scientific organization of labor at the children's school of arts should be provided for employees of the Department, namely the Director and the Deputy on educational work.

Recommendations: daily management addresses many organizational-administrative, planned, statistical and other documents. To create them and work with them often spent a lot of time working. To facilitate the work of the head to improve its performance and culture focused office equipment. The need for greater use of organisational tool also arises with increasing amounts of information, requiring quick processing. Traditional methods of gathering, processing and transmission of information become ineffective, and this requires finding and implementing high-performance systems of mechanization and automation of managerial work. A wide range of technical equipment allows to provide transition to a qualitatively new level of management, promotes the

effective solution of many administrative tasks, provides processing information in the short term. Organizational technique is used for efficient organization and automation of management work in order to improve the efficiency, effectiveness and culture management.

Thus, by performing tasks the main objective of the study, namely: development of recommendations on improving the activities of CAS from Nazran as the subject of socio-cultural sphere.
