

ABSTRACT OF THE GRADUATION THESIS

Title: "Coronavirus terminology in English and peculiarities of its translation into Russian."

Author: Teterkina Viktoriia Alexandrovna, group 411-17, Institute of Translatology, Russian Studies and Multilanguage Studies.

Scientific supervisor: PhD, Professor of Western European languages and cultures Dept., L.V. Pravikova

Research Initiator: Pyatigorsk State University

Relevance of the subject of the research: The relevance of this research is determined by the constant development of the Russian and English languages, the emergence of new lexical units that directly affect not only the expansion of the vocabulary, but also changes in the field of lexicology.

Tasks:

1. to consider general principles and methods of terminology comparison related to the spread of an infection;
2. to study terminological structure and general linguistic meaning of the lexical system in the pandemic discourse;
3. to analyze the national specifics of the pandemic discourse terminology.
4. to study Russian terminology that forms the system of the pandemic discourse of the unit;
5. to explore the English terminology on the pandemic and coronavirus;
6. to conduct a comparative analysis of the Russian and English coronavirus terminology;

7. to identify the peculiarities of the coronavirus terminology translation from English into Russian.

Theoretical importance of the research: is determined by its contribution to social discourse, lexical semantics, comparative linguistics and theory of translation.

Practical applicability of the research: is expressed in the perspective to use the conclusions and materials of the study in practical and theoretical courses of teaching English at the university, as well as for writing term theses and graduation theses on similar topics.

Results of the research: The analysis of the pandemic discourse has shown that the modern language reflects a global and unprecedented phenomenon (a pandemic), the memory of which is likely to remain in history. The presence of many thematic series of vocabulary of a neutral and evaluative nature indicates the versatility and multidimensional nature of this phenomenon. In general, the terminology that emerged or was updated during the pandemic of a new coronavirus infection acts as socially significant and informative nominative units necessary for the orientation of individuals, the regulation of the relations between them and adaptation to new life conditions.

Implementation advice: It seems promising to further study of coronavirus terminology in English, Russian and other languages.
