

## **Summary**

**Subject matter:** Modal particles as pragmatic markers of assumptions in interrogative sentences

**Author:** Ryazatnsev Oleg

**Supervisor of studies:** Professor Lozinskaya E.A.

The theme of my graduate work is "Modal particles as pragmatic markers of assumptions in interrogative sentences".

Our interest in this topic is not accidental, because the German language, like Russian, has a fairly extensive system of modal particles. Modal particles belong to the most widely used means of the German language.

The material for this research was taken from scientific and fiction literature. Research methods in this work are analysis of scientific and fiction literature, classification of the test material and generalization.

In this work modal particles are being analyzed in the parts of speech of the German language. The work consists of two main parts, introduction, conclusion and bibliography. In the theoretical section we research methods and approaches to the study of modal particles. The practical section of this work presents the analysis of the functioning of modal particles as lexical units. Chapter 1 : Modal particle in the parts of speech of the German language; Chapter 2: Some features of the functioning of modal particles (doch, wohl, denn, nicht, etwa).
