

ABSTRACT

Topic of the final qualification work: Improving the system of information support of local governments in the aspect of ensuring economic security (on the example of Kizlyar rural settlement of Mozdok municipal district of RSO-Alania)

Author WRC: Shamurzaeva Amanda Eduardovna

Scientific supervisor of the WRC: Cand. Econ. associate Professor, Professor of the Department of Economics, management and Finance T. V. Kasayeva

Organization customer: administration of the resort city of Kislovodsk.

Relevance of the research topic. One of the factors for improving the quality of management of local governments, ensuring their economic and information security in the context of the development of the information society is the digitalization and automation of decisions based on information support, which increases the level of effective management decisions and optimization of a whole set of costs. Improving the system of information support for local governments through the creation of "digital municipalities "can significantly improve the quality of services provided to residents of municipalities, and in addition create such conditions for the economic security of municipalities that in the future will allow them to become a world leader in the industry of creating "smart cities". Improving the system of information support for local self-government bodies based on electronic forms of performing functions assigned to local self-government bodies, involving residents of municipalities in their management based on discussion of management decisions and other forms of interaction, are in tune with the task outlined by the President of Russia for the formation and development of the digital economy, for example, in his message in March 2018, the President of the Russian Federation outlined the details of innovative and technological development of our country, where digital state and municipal management is allocated a separate place. That is why issues of improving the system of information support of local authorities, including in the context of

ensuring economic and information security the most important and relevant, especially at the present stage in the context of declining resource base and search digital drivers of economic growth of municipalities throughout the country through the development of interaction of bodies of state power and local self-government with citizens and business entities. Additionally, the importance and urgency of improving the system of information support of local authorities, including in the context of ensuring economic and information security of the scientists and practitioners in the sphere of state and municipal administration, noting that the problem of improving the system of information support of local authorities not solved at the present stage despite the significant progress in information system and information support of local authorities.

The purpose of the study is to study the theoretical foundations and develop on this basis measures to improve the system of information support for local governments in the aspect of ensuring their economic security.

To achieve this goal, you need to solve the following tasks:

- to study the theoretical foundations of information support of local government bodies in the aspect of economic security;
- to analyze the system of information support of local self-government bodies in the aspect of ensuring economic security (on the example of Kizlyar rural settlement of Mozdoksky municipal district of RSO-Alania);
- develop proposals for improving the system of information support for the activities of local governments in the aspect of ensuring economic security.

Theoretical and practical significance of the work. The theoretical significance of the research is to expand the theoretical understanding of the ways to improve the system of information support for local governments, including in the context of ensuring their economic and information security. Practical significance of the results obtained. The results of the study can be used in the development of measures to improve the information support system in the Kizlyar rural settlement of the Mozdok municipal district of RSO-Alania.

Research result. In General, based on our research, we can identify the key problematic aspects of information support for local governments in the aspect of ensuring economic security, which, in our opinion, should be aimed at improving all the efforts of the authorities and management of the subjects of the Russian Federation and local governments.

Recommendations:

As mechanisms for implementing programs to improve the information support system and develop the market for information products and services, in order to meet the need for information support for all subjects of the regional economy and generally contribute to the socio-economic development of the region and its municipalities, we highlight the following activities:

- development of information and communication services based on improving regional and municipal governance based on the "E-government" information system»;
- implementation of the information support system and elements of information and communication services in order to improve the efficiency of budget services in all key social areas of the region (health, education, etc.);
- promotion of educational programs in the field of information and telecommunications technologies, as well as training and retraining of state and municipal employees.
