

## Summary

**Theme of qualifying work:** Technology of the development of psychological stability as a factor in the formation of the individual anti-drug installations in adolescents

**Author:** Livshits Stella

**Supervisor:** Senior Lecturer. Of the Department of General and educational psychology E.A.Enns

**Organization:** Institute of Human Nature Studies, Federal State Educational Institution of Higher Professional Education "Pyatigorsk State Linguistic University."

**The relevance of the research topic:** the current socio-economic situation of modern Russia, taking into account existing economic, political and law enforcement issues, the problems of education and science, culture and art, as well as problems of lifestyle and living environment, a significant challenge to the individual and its social integration into society. These requirements are especially relevant for young people and children in particular, who are deprived of fundamental value - semantic foundations, moral - moral bases, principles of tolerance and respect for culture. Young populations are constantly exposed to adverse conditions of social movements, especially the constantly growing threat of drug aggression. Therefore, at all levels of interpersonal interaction of an adult and a child, a teenager should be laid constitutive of knowledge, skills adequate perception in relation to reality, must have laid the foundations for a constructive, moral - moral thinking aimed at enabling the socialization of the child in society, disclosing their positive and complementary personality traits. At the present stage of development of the drug situation in the country, we need a long-term comprehensive system psychoprophylaxis addiction aimed at the education of the child's personality as a whole. The urgency of the problem of counteraction to drug

addiction is recognized at the state level.

**Objective:** Development of the anti-drug program psychoprophylaxis installation teenagers

**Objectives:**

1. To analyze the research, regulatory, educational, practice-oriented literature on the study.
2. To develop tools for the study of psychological stability as a factor in the formation of the anti-drug unit.
3. To develop tools to study the relationship of personality characteristics and level of psychological stability Imichnsoti.
4. To consider the existence of a relationship between attitudes and personal characteristics of adolescents.
5. To conduct a study of the characteristics and level of personal psychological stability as a factor of anti-drug attitudes in adolescents.
6. To conduct a qualitative analysis of the data and on a basis to develop a program of effective psychoprophylactic work on the formation of anti-drug installations in adolescence.

**Theoretical and practical significance of the research:** theoretical significance of the research is the study and systematization of scientific knowledge about the problems of formation of psychological stability as a teenager with the personal qualities of individuals. The practical significance of the study lies in the development and implementation of innovative anti-drug program psychoprophylaxis install individual who works with the trained professionals can improve in a program of psychological correction of deviant adolescents and teenagers with drug and alcohol dependencies.

**Results of the study:**

1. In order to develop an effective anti-drug prevention program of psychological installation in adolescents was made a comprehensive study of psychodynamic, personality and socio-psychological characteristics.
2. As a result, the data of the primary cutoff was developed and implemented

in the experimental group, the anti-drug program psychoprophylaxis installation in adolescents.

3. secondary diagnosis was performed both research groups, which resulted in observable positive and dynamic influence on psychoprophylaxis experimental group. This confirms the importance of statistical data obtained by computer mathematical processing using the T-test.

**Recommendations** based on our research, we can conclude about the productivity and efficiency of implementation and realization of the anti-drug program psychoprophylaxis installation in adolescents. This program should be implemented in all public, educational, correctional institutions. Installation of anti-drug prevention program in adolescents should be conducted at regular intervals over several years. The fruitful and purposeful action psychoprophylactic program contributes to the preservation and development of society as a whole.
