

SUMMARY

The Subject Matter of the Graduation Thesis: The activity of local governments in the field of energy conservation and energy efficiency and ways to improve it (based on the materials of Pyatigorsk).

The Author of the Graduation Thesis: Bagova Inna Vladimirovna the 4th year student of the Higher School of Management.

The Supervisor of the Graduation Thesis: Eremina O.S., the Candidate of Historical Science, Senior Lecturer of the Department of Creative and Innovative Management and Law.

Information about the customer organization: Administration of Pyatigorsk city.

Actuality of research theme. Energy conservation and energy efficiency improvement should be considered as one of the main sources of future economic growth. A significant increase in the level of energy efficiency can be achieved only with an integrated approach to the issue of energy conservation. A systematic approach to energy conservation and energy efficiency at the local level will create conditions for improving the quality of life of the population, developing the economy and social sphere of the municipality, increasing the environmental safety of the territory, improving the level of improvement of urban areas, and increasing the efficiency of managing municipal property.

The aim of the study is to analyze the activities of local governments in the field of energy conservation and energy efficiency and develop appropriate recommendations for its improvement (based on the materials of Pyatigorsk).

Objective of the Research:

- to reveal the essence and content of energy conservation and energy efficiency;
- to study the powers of state authorities and local self-government in the field of energy conservation and energy efficiency;

- to analyze the activities of state authorities and local self-government in the field of energy conservation and energy efficiency in the Russian Federation;
- consider the current situation in the field of energy conservation in Pyatigorsk;
- disclose the main directions of activity of the administration of Pyatigorsk in the field of energy conservation and improving energy efficiency;
- identify ways to improve the activities of the administration of Pyatigorsk in the field of energy conservation and increase energy efficiency.

Theoretical and practical significance of the work. The theoretical provisions set forth in the final qualifying work contribute to the expansion of scientific information on the essence of energy conservation. In addition, the conclusions and practical recommendations developed during the study can be used both in the work of the administration of the resort city of Pyatigorsk, and in the activities of other municipalities, in the implementation of measures in the field of energy conservation.

The Findings of the Research. The main priorities of the municipal policy of the resort city of Pyatigorsk in the field of energy conservation and energy efficiency are: support and promotion of energy conservation and energy efficiency through a systematic and integrated approach. The following main measures are being implemented: organization and execution of work in municipal institutions of the city of Pyatigorsk, aimed at saving energy resources; measures in the field of energy conservation and energy efficiency in the housing stock; measures in the field of energy conservation and energy efficiency in communal infrastructure systems; construction of communication networks; registration of ownerless infrastructure facilities.

Recommendations. Energy conservation measures taken in recent years in Pyatigorsk have given a certain economic result, but could not change the situation radically. The development of municipal-private partnerships in the professional management of energy conservation of objects of budgetary organizations and housing should be one of the promising areas of activity of the city administration.

The energy service contract is the main mechanism of municipal-private partnership in the field of energy conservation.
