

SUMMARY

Topic of final qualification research: Improving the management of landscaping of the municipal territory (based on the materials of the Pyatigorsky village council of the Predgorny municipal district of the Stavropol Territory).

Author: 5th year student of Higher school of management Larkin Nikita.

Scientific supervisor: O.S.Eremina, phd., associate professor of the chair of creative and innovative management and law.

Information about the ordering customer: administration of Pyatigorsky village council of the Predgorny municipal district of the Stavropol Territory.

Topicality of the research:

Improvement of the municipal territory is the most important component of the potential of the municipality and one of the priority tasks of local governments. Improvement means the availability of all necessary amenities serving the population of any locality. In this sphere conditions for the population are created that provide a high standard of living for both the individual resident and for all residents of the city, district, and microdistrict.

Improvement of the municipal territory is of particular importance in situation of increased anthropogenic pressures, disturbing environment of cities and towns.

The purpose of the research is the study of theoretical aspects and the development of practical recommendations for improving the process of managing the landscaping of the municipal territory.

Research Objectives:

- to study the concept of landscaping and classification of elements of improvement of the territory
- explore the regulatory framework for the management of landscaping of the municipal territory;
- to consider the features of the management of landscaping of the municipal territory;
- give a general description of the municipal territory Pyatigorsky village council;
- conduct an analysis of the practice of managing the improvement of the municipal territory;
- identify ways to improve management practices for the improvement of the municipal territory Pyatigorsky village council.

Theoretical and practical significance of the research. The theoretical provisions set forth in the final qualification research contribute to the refinement and expansion of scientific information on the content of activities in the landscaping. In addition, the conclusions and practical recommendations

developed during the research can be used both by local authorities of the Pyatigorsky village council, as well as in the activities of other municipalities.

Results. In order to ensure favorable living conditions of the population and ensure cleanliness and order on the municipal territory of the Pyatigorsky Village Council, the municipal program "Formation of the modern urban environment of the Pyatigorsky Village Council of the Predgorny Region of the Stavropol Territory for 2018-2022" was adopted and is being implemented. As part of ensuring the safe operation of landscaping facilities and preserving their aesthetic appearance, measures are being taken to ensure comfortable conditions for the life and work of the population. Works continue on the restoration and introduction of new children's gaming facilities, playgrounds, the installation of small architectural forms, and the repair of the courtyard areas of apartment buildings and common areas of citizens of the settlement.

Recommendations. An important area of activity of the administration of the village Pyatigorsky in the field of improvement of the municipality should become a regular inventory of landscaping facilities and an inventory of green spaces. Regular inventory of landscaping facilities will allow the administration of the village Pyatigorsky to evaluate the quantitative and qualitative improvement and greening of the territory of the municipality for a given period, and will also provide the basis for the long-term planning of both operating costs for maintaining facilities and plantings, as well as costs for new construction and repair of facilities.
