

Abstract

Theme of qualifying paper: "The development of adolescent personality depending on the social and psychological status in the study group."

Author of qualifying paper: Z.M. Inalova.

Scientific director of qualifying paper: PhD. psychol. sciences, senior teacher of the Chair of Psychology and Methodology of the theory of psycho-pedagogical education M.M. Erkenova.

Information about the organization, the contracting authority: Pyatigorsk State Linguistic University, The Institute of Human Studies, the Chair of Psychology and Methodology of the theory of psycho-pedagogical education

The urgency of the research: The urgency of our work is due to the need for a comprehensive analysis of the development of adolescent personality by optimizing their interpersonal relationships, the need to study the sociometric status as one of the factors in the development of the structure of integrated individuality in adolescence, and insufficient development of this problem in psychology.

Objective: To study the characteristics of integrated individuality structures of teenagers depending on the social and psychological status in the study group.

Objectives:

1. To examine different approaches to the study of individuality in psychological science.
2. To reveal the problem of influence of a personality of a teenager on social and psychological status in the study group.
3. To identify the peculiarities of the development of integrated individuality structures of adolescents with different social and psychological status in the study group.
4. To develop practical recommendations for effective and adequate development of integrated individuality structures of adolescents with lower socio-psychological status.

Theoretical and practical significance of the research. The range of factors that influence the development of integrated individuality structures of adolescents is expanded, the findings are the most important argument in favor of the idea of the universality of the theory of integrated individuality, the results of the research can be used in organizing and conducting psycho and psycho-diagnostic work with adolescents in the study group, the findings obtained in the study may be used by the school psychological service in the preventive, corrective work, psychological counseling and the development of integrated developmental programs for adolescents.

The results of the research. In this research, we have identified the qualifying features of the development of integrated individuality structures of teenagers that affect the social and psychological status in the study group. Taking into account the results of the experiment we have worked out the remedial developmental program of the structure of individual of young people with low socio-psychological status in the study group.

Recommendations. Social and psychological status of the teenager in the study group depends on the development of the structures of the integrated individuality. It was found that the socio-psychological status of the teenager in the training group is influenced by the properties of the psychodynamic, personal and socio-psychological level of the integrated personality. The harmonization of the structures of integrated individuality of teenagers serves as the basis for optimization of interpersonal relationships and improves the social and psychological status of the teenager in the study group.
